Zachman Framework

EXAMPLE: RETAIL COMPANY

PERSPECTIVES / ASPECTS	What (Data)	How (Function)	Where (Network)	Who (People)	When (Time)	Why (Motivation)
Planner (Scope)	Business entities: Customer, Product, Order	Core processes: Sell, Deliver, Support	Stores, warehouses, online	Board, CEO, department heads	Quarterly planning, seasonal cycles	Grow market share, improve customer loyalty
Owner (Business Model)	Customer data model, product catalogue	Order management process, inventory replenishment	Store locations, distribution network	Store managers, logistics team	Daily operations, weekly reporting	Reduce cost-to-serve, increase NPS
Designer (System Model)	Customer DB schema, product DB	Order system logic, inventory management	Network topology, store-to-hub connections	System owners, process managers	Order lifecycle, reporting schedule	System KPIs, data quality targets
Builder (Technology Model)	Customer table in SQL, product catalogue DB	Microservices: order-service, inventory-service	Cloud region: EU-West, CDN configuration	Dev teams, cloud ops, security engineers	CI/CD pipeline, release schedule	SLA targets, uptime goals
Subcontractor (Detailed Rep.)	CREATE TABLE customer (...)	API endpoint specs, message queue definitions	IP ranges, firewall rules, DNS configuration	Individual engineers, external contractors	Sprint cycles, deployment windows	Code quality metrics, test coverage
User (Functioning Enterprise)	Live customer database in production	Running order management system	Active store network + e-commerce platform	Real users, support staff, customers	24/7 operations, live transactions	Revenue targets met, incidents resolved

This example uses a fictional retail company to illustrate how the Zachman Framework maps architectural decisions across all six perspectives.
